

How Bearacade® and B2™ Lockdown Response Systems Work and Why

1. Only one 5/16" pre-drilled Anchor Hole in the floor
2. No change to the door or door frame. No change to fire rating of the door assembly.
3. No mounted plates on the door or floor. No permanently mounted hardware.
4. No trip hazard through the doorway
5. Will only work on the doors you choose
6. Will only work in the correct direction – no trapping.
7. Uses the only part of the door where direct access for our defaulting tool can pass.
8. Entire process takes just a few minutes per doorway.

- By using the existing doorjamb as the constant and drilling through the device when preparing, the unit will deploy quickly every time.
- There is no need for any marking on the door or floor. There is no sliding back and forth to find the correct position. Just on the door, against the doorjamb, and drop the pin.
- Turn off lights and retreat to an area of concealment and cover.
